Professional Summary

Frontend Software Engineer with 2.5+ years building high-performance web applications using React.js, Next.js, and JavaScript (ES6+). Delivered solutions improving mobile traffic by 60% and reducing bounce rates by 35%. Expert in component-driven development, performance optimization, WCAG accessibility, and Agile collaboration.

Work Experience

Metis Labs B.V.

Frontend Engineer

Feb 2026 – Present

- Own architecture and implementation of BrandHub's order and production-order management module using **React.js** and **TypeScript**, driving order-line logic, delivery-preference/route-type rules, printproof status handling, and cancellation flows across the order-to-cash pipeline
- Led the rebuild of the order header and seller/product info panels into a single, **reusable component pattern**, replacing ad hoc implementations and adopted across consolidated-order modals and custom supplier-line scenarios
- Designed the supplier portal's quantity-check and variance system from the ground up: a reusable modal abstraction generalizing four stage-transition flows, with live variance calculation, bulk-action tooling, and validated document upload, shipped behind a **feature flag** to de-risk a business-critical workflow
- Set technical direction for the finance/invoicing UI (credit notes, Exact Online integration, PDF/HTML document templates) and the customer portal's settings and payments surfaces
- Established **reusable design-system patterns** and an EN/NL/DE **localization architecture**, reducing duplication and keeping four portals consistent as the product scaled

Wolves & Company

Software Engineer (Freelance) - React

Apr 2024 – May 2025

- Development and implementation of responsive, mobile-first design strategies for over 15 websites, leading to a 60% increase in mobile traffic and a 35% reduction in bounce rate, significantly enhancing user retention.
- UI development for an equity management application, emphasizing data visualization and the optimization of user-centered workflows.
- Optimization of performance and creation of reusable React components for ClientGlide, a patient management system designed for doctors. Components included appointment scheduling, patient record handling, and real-time communication features.
- Enhancement of user interfaces through customization and integration of best practices in modern web development frameworks.
- Collaboration with diverse stakeholders to define project requirements, ensuring quality delivery within agreed timelines.
- Adoption of scalable coding techniques to improve maintainability and facilitate seamless future updates or iterations across developed projects.

EdgeCRM

Associate Software Engineer - React

Jan 2023 – Mar 2024

- Developed and optimized user life-cycle processes, implementing efficient workflows for creation, editing, and deletion that reduced user management time by 40% and decreased error rates by 25% through automation.

- Integrated secure password change functionalities to strengthen data security measures within the system.
- Demonstrated proficiency in managing user data storage, maintaining high efficiency and reliability with over 1,000 user records at a 99.99% accuracy rate.
- Enhanced system usability and security protocols, contributing to improved overall application performance.
- Focused on delivering precise workflows that streamlined operational efficiency while maintaining stringent quality standards for data handling practices.

Senior React Developer

Dec 2023 – Mar 2024

- Led the development of a multilingual e-commerce food delivery portal from scratch using React, ensuring high-quality deliverables and efficient project execution.
- Designed and implemented an enrollment flow tailored for elderly users, significantly improving accessibility and user experience.
- Coordinated with QA and backend teams to ensure seamless application functionality, resulting in a 25% reduction in bug reports and a 20% improvement in deployment efficiency.
- Developed features focused on storefront management and accessibility for elderly users, enhancing usability across diverse demographics.
- Maintained real-time updates and implemented robust security measures throughout the entire development lifecycle to ensure platform reliability.
- Established streamlined communication channels to improve team alignment with objectives, boosting team productivity by 15% and achieving project deadlines 60% more effectively.

Ilmtech Solution

Fullstack Engineer

Jan 2022 – Nov 2022

- Developed and implemented a user login flow, enhancing functionality and usability.
- Ensured UI responsiveness for an optimized user experience across devices.
- Collaborated closely with design teams to integrate visually appealing features aligning with project goals.
- Worked with backend teams for seamless feature integration, ensuring high performance and smooth operation.
- Contributed to the development of a full-stack application using React, addressing both front-end and back-end requirements.

Technical Skills

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Component-driven Development, Responsive Design

Styling & UI: TailwindCSS, SCSS, Material UI, Framer Motion, Mobile-first Design

Performance: Lazy Loading, Code Splitting, Core Web Vitals, Lighthouse Optimization, SEO

Accessibility: WCAG 2.1 AA, ARIA Labels

Backend: Node.js, Express.js, MongoDB, REST APIs, API Integration

Tools & Methods: Git, GitHub, VS Code, Postman, Figma, Agile/Scrum, Code Reviews

Projects

Dextor Components

Feb 2024 – Present

Open Source React UI Library — component-dextor-io.pages.dev

- Architected lightweight, modular React component library with TailwindCSS and Vite, featuring 24+ production-ready components with comprehensive PropTypes validation
- Published to [npm](https://www.npmjs.com/package/component-dextor-io) achieving 100+ downloads, enabling developers to build responsive UIs 60% faster with live documentation and interactive examples

- Optimized bundle size through tree-shaking and code splitting, reducing final output to 74KB minified with MIT license for community adoption

GeoBlock Tester

Nov 2024

Website Accessibility Testing Tool — geoblock-tester.pages.dev

- Built web tool to test website accessibility across 195+ countries using proxy networks and geolocation APIs, helping developers verify geo-restrictions and content availability
- Deployed on Cloudflare Pages with React frontend and integrated real-time testing capabilities for instant feedback
- Designed intuitive UI enabling non-technical users to perform complex geo-testing without manual proxy configuration

Education

Manipal University

MBA, Information Technology

Expected: Dec 2025

Mumbai University

BSc, Information Technology

Graduated: May 2021
